

DURYEA POWER COMPANY, INCORPORATED

MAKERS OF

AUTOMOBILES, MOTORS, LAUNCHES.

W. Elm and River Streets

Mr. G. F. Myers,
Columbus, O.

READING, PA.

March 4, 1904.

Dear Sir:-

Yours of the 29th at hand. I have been absent, which accounts for delay.

The weight 5# per horse power represents the motor stripped. The total weight ready to run with a set of very light batteries amounted to 5-3/4# per horse power. We got \$1600. for that motor. We will build you two duplicates of it for \$2500. We can probably complete these in 60 days after receipt of order but we would not care to agree to do this, for we get exceedingly busy in April. We would, however, crowd the work as rapidly as possible this month if the order is placed immediately, so it looks as tho we should be able to get it out.

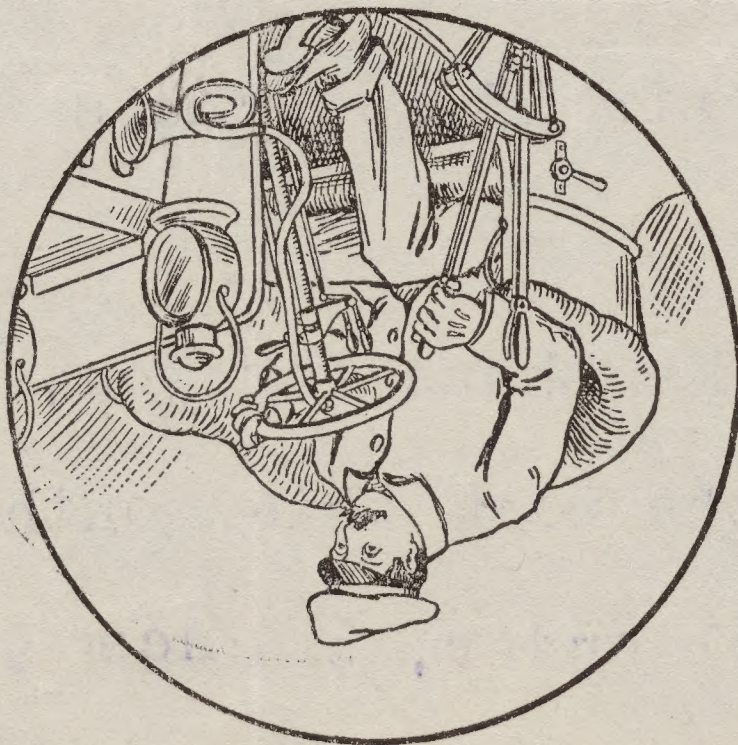

We are not in position to supply you with speed changing mechanism, for we have not time to get out the patterns and drawings.

The motor cylinders are 4-1/2 x 5-1/2 and the one supplied Prof. Pickering was water cooled. We are building now a most effective form of air cooled, which we would gladly supply if we were sure ~~to~~ ^{it would} do your work. We expect to know before many days what results this will give but are afraid to promise much for an air cooled motor gets very hot.

If you wish us to make these for you, please place your order at once, so we can rush the work this month.

Our terms are 40% with order, balance after motors have been tested and we specify that we must have a bright day for

testing as a moist atmosphere decidedly reduces the power of the motor.

We will gladly give you any further information and trust you will favor us with your order.

Very truly,

DURYEA POWER CO.
